Jurnal Tribologi (JTrib) is published by the Malaysian Society of Tribology (MYTRIBOS). This is an open access peer-reviewed international journal dedicated to the rapid publication of high-quality papers on important topics in both tribology and emerging fields closely related to friction, wear, and lubrication. JTrib's new editorial board was appointed on April 1, 2022.

The journal was launched in June 2014 and is now published four times a year online (March, June, September, December). Clarivate Analytics began indexing the journal in the Web of Science Core Collection: Emerging Source Citation Index in 2015 (Volume 4). Since Volume 20, all JTrib metadata have been indexed in the Scopus database (March 2019). JTrib's SCImago Journal Rank (SJR) and Journal Citation Indicator (JCI) in 2021 are 0.26 (Q3) and 0.22 (Q4), respectively.

JTrib aims to publish full research papers of original, significant, and highest scientific standards, providing a forum for researchers, engineers, academics, and industry professionals from around the world to present their research findings and development activities in established and emerging areas of tribology. The journal contains a mix of experimental, numerical, and theoretical articles on all aspects of tribology.

Volume 36 featured ten articles, one of which examined the most imitated animal species for biomimetic materials in the field of tribology. Furthermore, there are articles devoted to 3D printing techniques used for improving surface quality and wear of materials. Some other articles were presented at the 7<sup>th</sup> International Conference and Exhibition on Sustainable Energy and Advanced Material (ICE-SEAM 2021). It is hoped that these papers will be used as a resource by researchers all over the world.

As Chief Editors, we would like to express our appreciation to all of the contributors who have made significant contributions to the overall quality of this 36<sup>th</sup> volume of JTrib. All articles are original research works with the goal of being applicable in a variety of situations.
